

OUR FACTORY

## INNERE PRODUCTION

*Take a tour inside our advanced factory  
in Bandung, Indonesia*

At INNERE, we are striving to make high quality furniture which not only has a sophisticated design but also well-built and enjoyable to live with. In order to achieve this purpose, we built an advanced factory and invested in a full production line of woodworking machines from a respectable company, HOMAG group, Germany.

Our production journey starts from our studio where our team of designers and drafters work together in creating accurate and detailed shop drawings. Durable and long lasting furniture requires a high quality base material, which is why in our production, we only use full meranti plywood from one of the best plywood manufacturers in Indonesia.

## OUR FACTORY

The production step begins with a cutting process where the panels are put inside a running saw machine. This fully automated machine cuts the panels to the desired dimensions specified by our operator computer input. Continuing the production journey, the panels go to the edge banding machine where the panels will have their sides stucked together. This is a very important step since a high quality furniture comes from high quality details.

Next step, the panel will be transported to the CNC processing center where the drilling and the routing happen in an efficient and high precision way. Finally, the panel will go through our state-of-the-art wide belt sanding machine where the smooth and luxurious furniture surface will become a reality.

INERRE holds a commitment to deliver only outstanding furniture products to its clients by keeping the vision on the search for highest quality materials, skillful wood craftsmen, and utilizing the latest technology available.

## OUR FACTORY

### BASE MATERIAL
